

DOCTOR RECOMMENDS STEM CELL NUTRITION

Jim Taylor, M.D., graduated from Indiana University Medical School in 1967. He interned at South Bend, Indiana for a year, then served two years in the Army as a flight surgeon. Since 1971, he has practiced family medicine and is a member of the American Academy of Anti-Aging Medicine:

I have practiced traditional medicine for twenty-eight years and got involved in alternative medicine seven years ago. I wanted to do more than treat symptoms. In an attempt to prevent disease and improve patients' conditions that medicine cannot help, I turned to natural products.

A friend and fellow doctor had a stroke two years ago resulting in a severe speech impediment. He called me recently and, to my surprise, he now spoke clearly on the phone. He said stem cell nutrition healed his condition. He believed it could help others with chronic disease.

I decided to try stem cell nutrition myself. For about twenty years, I have suffered severe restrictive motion with constant cracking and popping in my neck. I could not turn my head more than thirty degrees to either side. I also had severe arthritis in my fingers and diabetes.

Within ten days of taking stem cell nutrition, I had full range of motion in my neck. My fingers move freely now, and I have been able to stop taking diabetic medicine because my blood sugar level has stabilized. Many scars have all but disappeared. I am very impressed with stem cell nutrition.

One of my patients had a severe neurological disorder. Her muscles were very weak, plus her hands and feet felt numb and tingling. She was unable to work and could not drive. Within ten days of beginning stem cell nutrition, she was symptom free and fully functional again.

Another patient sustained a brain injury during a motorcycle accident. She suffered double vision, could not speak well, and could not walk unassisted. Within two months of beginning stem cell nutrition, all of her symptoms disappeared.

I treated a woman with persistent leg ulcer. She was also blind in one eye and had lost eighty percent of her vision in the other eye. Her leg began to heal after she started taking stem cell nutrition, and her vision improved to the point that she can watch TV and even read, something she couldn't do before.

A young man had a severe brain injury in an accident with an ATV five years ago and was in a coma for a long time. Even after he regained consciousness and started physical therapy, his progress was very slow.

Within two weeks of starting on stem cell nutrition, his physical abilities increased substantially. He can now use a walker on his own and has increased motion in his right arm. He is full of hope, because he is finally seeing progress.

One lady told me about giving stem cell nutrition to her dog after the veterinarian urged her to put the thirteen year old spaniel down. The dog was not eating well, could not stand up, and had to be carried around. Within five days of beginning stem cell nutrition, the dog was eating and walking. Soon, he could use the stairs like a much younger dog. She can't wait to see what the veterinarian has to say about her dog now.

Stem cell nutrition is as safe as it is effective. Stem cell nutrition does not interfere with most medications nor have any allergies been reported. It often works in a matter of days. My twenty year neck stiffness was fully resolved in ten days.

Stem cell nutrition gives the body the raw materials it needs to regenerate damaged tissue. It does not treat symptoms it goes right to the cause. As far as I am concerned, stem cell nutrition will change medicine as we know it. I would recommend stem cell nutrition for anyone."

PHYSICAL AND MENTAL SUPPORT

Fernando Aguila, M.D., graduated from the University of Santo Thomas in Manila, Philippines. He finished his internship at Cambridge City Hospital, Cambridge, MA and completed his residence at the New England Medical Center in Boston, MA. He obtained a fellowship in OBGYN anesthesia at the Brigham and Women's Hospital in Boston and a fellowship in cardio-thoracic anesthesia at the Cleveland Clinic Foundation in Cleveland, OH.:

"Due to a heavy patient load, I have recently found that I tire more easily, my legs are cramping, and by the time I get home, even my shoulders and rib cage hurt. I knew I had to find a way to increase my stamina, energy and vitality.

A friend gave me an information about stem cell nutrition and how it promotes the release of stem cells in the body. One of the components apparently promotes the migration of the stem cell to tissues or organs where regeneration and repair is needed most. My attention was drawn to the fact that it can increase energy, vitality, wellness, concentration, and much more. It sounded just like what I needed.

Since then, I've heard testimonials from others who have experienced significant improvement in their painful arthritis. They claimed the pain had become almost negligible. I heard about patients who regulated their diabetes, blood pressure, and had improvements in cardiomyopathy, congestive heart failure, and even myocardial infarction.

The improvements sounded dramatic. Because of all of their testimonies, I was willing to believe it could promote wellness in the human body.

I tried stem cell nutrition myself. After a day of hard work, I realized I wasn't tired at all, my legs were not aching, and I didn't have any shoulder pain. I decided the stem cell nutrition must be working. I continued to take it, and was able to work so efficiently and steadily that one surgeon commented that I was moving like a ball of fire. Stem cell nutrition gives me support physically and mentally. I look forward to seeing what the major medical journals have to say about the studies being done with this new approach to wellness."

THE MOST POWERFUL CELLS IN THE BODY

Cliff Minter, D.P.M. (Retired), graduated from Illinois College of Podiatric Medicine. He completed his surgical residency at the Hugar Surgery Center in the Hines Veteran Administration Hospital in Illinois before going into private practice in Ventura, CA. Dr. Minter is a national and international speaker on the subject of business and nutritional products:

Stem cells are the most powerful cells in the body. We know that stem cells, once they're circulating in the bloodstream, will travel to any area of the body that has been compromised or damaged and turn into healthy cells.

There have been controversial discussions about the new stem cells found in embryos, but the truth is that everyone has adult stem cells in their own bodies. We are all created from stem cells. As a child or a young adult, your body automatically releases stem cells whenever you injure yourself. That's why you heal so fast when you are younger. After about age 35, we don't heal as fast anymore, because the stem cells aren't released the same way as when we were younger. Stem cell nutrition helps all of us heal our bodies.

If you look at the New England Journal of Medicine, you'll find that the number one indicator of a healthy heart is the number of stem cells circulating in the body.

Stem cell nutrition is the organic and all-natural way to stimulate the bone marrow to release adult stem

cells into the bloodstream.

By taking stem cell nutrition, you can maintain optimum health and aid your body in healing itself. It's certainly a better way to recuperate from an illness than using prescription drugs, because even when a medication works, it can often be hard on your liver and the rest of your body. Stem cell nutrition has no negative side effects. This makes it a powerful approach to healing and good health in general. I found out about stem cell nutrition after someone asked for my opinion on it. I did some research and found it to be one of the greatest ways to slow down aging that we have.

Aging is nothing more than the breaking down of cells. Stem cell nutrition combats that action. As cells break down, stem cell nutrition replaces them with the healthy cells. This is the greatest, most natural anti-aging method I know. I was skeptical at first, but the results I've personally seen in people I've talked with have been wide-ranged. Lots of people have reported an increase in energy and better sleeping patterns.

I've seen people with arthritis in various parts of their bodies reverse the disease, and people with asthma end up with their lungs totally clear. One person that was on oxygen almost 24/7 is now totally off of oxygen. Two ladies who suffered badly from PMS told me they were 100 percent symptom-free within weeks of starting the stem cell nutrition. Two people I know had "tennis elbow" which usually takes about six to nine months to heal. Within weeks of taking stem cell nutrition, both report their "tennis elbow" is gone. It makes sense, because stem cells go to whatever area is compromised and turn into healthy cells. I use stem cell nutrition as a preventative. I've noticed an increase in my energy level and an improved sleeping pattern.

Stem cell nutrition has zero negative side effects, is very powerful and we know how it works. It's good for children as well as adults. This is the best, most natural way I know to optimum health. If you just want to use it for prevention, this is the best thing I know for staying healthy. And if you do have health challenges, it is the best way I know of overcoming those and regaining optimum health. I recommend it to every body.

**TESTIMONIALS REGARDING JDI WITH
STEM CELL NUTRITION SUPPORT**

Just 4 days after taking JDI's Multi Vitamin with stem cell nutrition, I noticed that a pain I had in my joint was gone. I also have other health problems and I have noticed my lab numbers are looking better and I have a lot more energy. It's been 2 weeks now and I'm telling everyone about this product. It just makes you feel great! Thanks JDI.

I am a Viet Nam veteran and I had some health problems ever since I came home in 1970. Recently I have been taking stem cell nutrition vitamins and I have noticed that my problems are now under control without medication. I give the credit to the stem cell nutrition vitamin product as I could not feel this well even with medication. I am off medication at last.

Juan Loa

The Stem Cell Nutrition Vitamins have already seemed to help with the some issues I was having from my left lung. Those problems have gone away.

I have also reduced the medication needed to help with the pain in my feet. I had a massive heart attack 4 years come this August. I only have 28% of my heart muscle left. Walking is my main exercise for cardiovascular system. I can now walk the same distance faster. I walk 1 mile 6 days a week.

I can hardly wait for my semi-annual check up at the doctors and see what the difference is from my last check up.

The response since joining has been immediate and always helpful. The product is life changing. My mother had brain surgery and in the short time since taking the product, her health and memory has improved dramatically. My grandmother has many health issues. At her last doctor's visit he told her that her tests are better than they have been for over 20 years. My step-father is an avid golfer but has not been able to play often due to health problems. He is now playing every week and even got back into his men's league. I only wish my grandfather had not died in December 2010. I truly believe this would have prolonged his life.

Thanks again.

On Memorial Day (May 31,2010)I was in our outdoor planter (about 2 1/2 ft. from ground)doing some trimming and fell between the planter and our bushes. The only injury I incurred was to my little finger on my left hand. Was also embarrassed about walking off the planter. I had to run cold water over the finger every day to ease the pain. I'm left handed and writing was very difficult because of the pain. That pain did not cease until I started taking the JDI Stem Cell Vitamin over a year later on July 6,2011. After taking JDI Stem Cell Vitamin for only 3 days, the pain is gone; I can write; move the finger; and grasp things with my left hand again. I no longer need to use cold water to ease the pain. Thank You Dr. John and JDI.

Stan Carroll.

I am very grateful for being introduced to the JDI Stem Cell Vitamins and the opportunity. Health and wealth are the reasons for me joining. The leadership of Dr. John has proved to me that the future looks bright. The simple, yet very lucrative compensation plan is paying me checks already. The product is first class and I have more energy and mental clarity. A recent article in the paper showed that the average life expectancy for males fell from 77 years to 69.7 years. Hopefully with taking JDI Stem Cell Vitamins I can help bring the numbers back up.

Mark Recker.

My father, 77 years old, has been in a Nursing Home for over 2 years now. He had lost his ability to walk and his speech was hard to understand. He has been on the JDI Stem Cell Vitamins for a little over a month now. To my amazement, he has started to walk with proper supports and with the help of the Nursing Home staff. He used to spend his days in bed, now I find him sitting in his wheel chair. His speech is much more clear and

he looks happier and much more motivated to get better. This brings tears to my eyes. Needless to say, this is nothing short of miraculous to me. Quite frankly, I had given up hopes of him getting better. There was no change in his intake of medicine, his diet, nutritional products, or anything else. The only change was that I started giving him just 2 tablets of the JDI vitamins in the morning. As for myself, I have been taking the vitamins for a month and a half now. I am quite healthy, but I find that I am much less drowsy during the day now, I am more alert (I feel sharper) and I am sleeping better.

Aziz Jangbar
Grateful JDI Customer

I am a gardener and will occasionally get a pretty good cut if I am not careful. I am a notorious slow healer (whether bruising, cutting etc..). I had a cut on my right hand near the bottom of my little finger that I think I got weekend before last. I put nothing on it, nor did I even bandage it. I pretty much forgot it. As of today the cut is completely healed with just barely a noticeable mark and a slightly rough spot if you really feel for it. Usually those things I would carry with me throughout the gardening season never really fully healing. I have been taking JDI multi-vitamin for 2-3 weeks and I seem to have healed quicker,
T. M.

I was diagnosed with major depression in 1998. I tried many products, looking for something other than the prescribed anti-depressant medications. I knew there was an alternative out there somewhere. Prior to the stem cell vitamins I did find a product that helped more than the others, however something was still missing. My husband introduced me to Stem cell nutrition. I began taking the product in March 2011 with immediate results. Depression sufferer's really don't feel like doing much on a daily basis. I would lay on the couch for hours sometimes days. Well I'm off the couch for good. I'm in the gym 6 to 7 times a week. I've found the missing link. Stem cell vitamins seems to have targeted the areas of stress and anxieties in my life. The depression is Finally under control after all these years. I feel GREAT & Alive again. I highly recommend this product to everyone.

Thank's so much JDI

PS: And Thank's to my husband (Marvin) who is very happy.
Patricia Barnes

Hi Aziz & John I went to my Doctor's yesterday for the results of my Annual. That was the FIRST time my EKG did not show any Premature Ventricular Contractions in the almost twelve years that I have been going to my Doctor since he first found that I had this problem! Everything else was good also, including my glucose down from 140 to 130, my good cholesterol being higher than my bad C, my BP was down, etc. etc. The only thing different on the minus side was that my Carotid Arteries were slightly higher by 2% but still under 40%, so no worries there either. I took two caps in the AM and two in the PM. just to get a jump start in my blood stream.

Here's to Good Health, Brother.

Bill, Wm Coberley
